

PSREdit310 Release Notes

PSREdit310 - Version 1.03 Release 4 (April 17, 2019)

- Due to changes in the current version of the Whistler USB programming cables, Cable access mode has been changed from Direct to COM port. The new cables do not use the FTDI chipset so using the Direct access mode is no longer an option with these cables. This change will not affect existing installations but will set this option in new installs. This option is located in the Serial Port Settings area under the Configuration menu.
 - Updated copyright dates for PSREdit310 and PSRCtrl310.
-

PSREdit310 - Version 1.03 Release 3 (January 7, 2016)

- Corrected an issue with conventional import from the RadioReference.com web service when selecting the Nationwide option.
 - Updated the copyright dates
-

PSREdit310 - Version 1.03 Release 2 (September 26, 2015)

- Made modifications to the weather channel attenuation settings box to allow screen readers to enunciate the frequencies for the checkboxes..
 - Corrected an issue with conventional import from the RadioReference.com web service where a category has multiple sub-categories with the same name.
-

PSREdit310 - Version 1.03 Release 1 (September 22, 2011)

- Added support for the RadioReference.com Nationwide conventional frequency listings in the import screen. When selecting a state/province within a country, look for the “Nationwide” option to access these agencies.
-

PSREdit310 - Version 1.02 Release 4 (September 16, 2011)

- Removed a debug pop-up in the conventional import area.

PSREdit310 - Version 1.02 Release 3 (September 15, 2011)

- Resolved issue with RadioReference.com web service update causing a crash when trying to import data.

PSREdit310 - Version 1.02 Release 1 (April 26, 2011)

- Removed all support for the RadioReference.com CD-ROM. The RR CD-ROM has not been published in nearly 2 years and required a lot of custom code to support all versions.
- Updated the RadioReference.com SOAP interface to the latest version.
- Added option to set the amount of delay between data blocks when uploading to the scanner. The default is 40ms between blocks.
- Added some code to the upload process to attempt to reduce or eliminate the checksum error issue.

PSREdit310 - Version 1.01 Release 1 (January 29, 2011)

- Added option to import PSREdit500 data files. The import is located in the File->Open area. When importing, objects that are not supported by the PSR-310/PSR-410 will be removed from the imported data.
- Removed the default scanner model option from the Data options screen. This was left over from the conversion from PSREdit500 to PSREdit310.

PSRCtrl310 - Version 1.01 Release 1

- Added support for the PSR-310/PSR-410 CPU firmware version 1.1. The data format changed between versions and was incompatible with 1.0 output. PSRCtrl310 now requires CPU firmware 1.1 or later.

PSREdit310 - Version 1.00 Release 3 (January 22, 2011)

- Fixed an issue with importing data from a PSR-300 where the CTCSS and DCS codes were not being properly set.

PSREdit310 - Version 1.00 Release 2 (January 18, 2011)

- Updated copyright dates to include 2011.
- Fixed issue with the error message displayed when PSREdit310 cannot connect to check for updates.
- Added support for the Bold display font.
- Fixed issue when importing Motorola systems from a PSR-300 scanner where talkgroup IDs were not being properly set.
- Fixed issue with some items on the Help menu not being visible.

Note: The version of PSRCtrl310 included in this installation will not work with CPU firmware version 1.1. The data transfer has changed to include the 5th line of screen data. I am currently unable to test these changes. An updated version of PSRCtrl310 will be made available as soon as possible.

PSREdit310 1.00 Release 1 (November 13, 2010)

Welcome to PSREdit310!

PSREdit310 is designed to program and control the new GRECOM PSR-310 and, when released, the PSR-410 scanner. This program is similar to PSREdit500, but has the Digital options removed.
